

1 **Supplementary Table 1.** Multiple comparisons between six populations of *Trigonocaryum*
 2 *involucratum* by Tukey's HSD test; asterisks indicate significant differences among the means at
 3 $p<0.001$ according to Tukey's HSD test. All parameters were \log_{10} -transformed to achieve
 4 normality.

Population pairs	Mean difference between population pairs ***			
	$\log_{10}(\text{SLA})$	$\log_{10}(\text{LA})$	$\log_{10}(\text{ShN})$	$\log_{10}(\text{SM})$
