

SUPPLEMENTARY INFORMATION

Fig. S1.

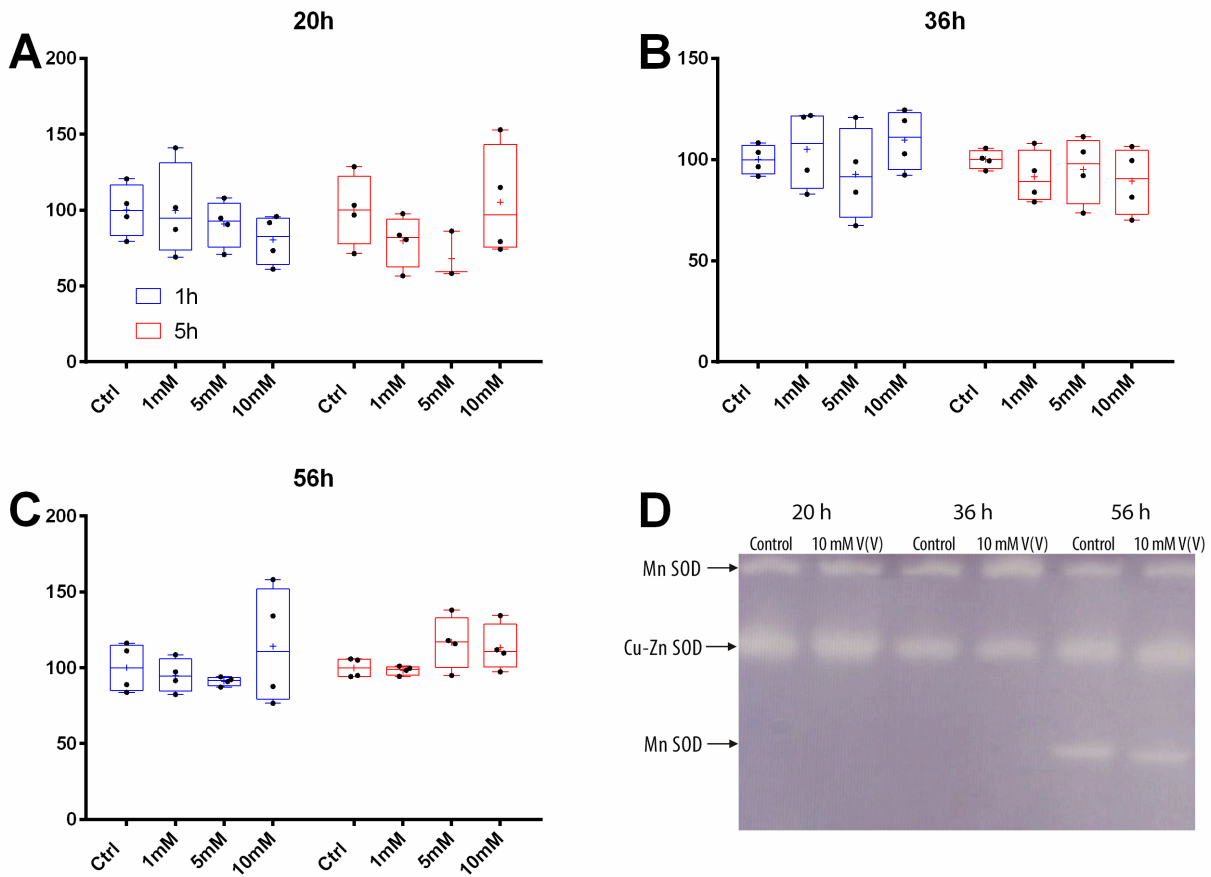

Fig. S1. CAT activity at 20 h (A), 36 h (B), and 56 h (C) of growth after treatment with 1 mM, 5 mM, and 10 mM V(V) for 1 h or 5 h ($n = 4$). Control of each group was compared to treatment by Mann-Witney rank sum test. **D.** Representative gel of SOD activity at 20 h, 36 h, and 56 h of growth after treatment with 10 mM V(V) for 5 h. Additional isoform of MnSOD is expressed in stationary phase mycelia.
